AMENDMENT AND RESPONSE

Dear Sir:

In response to the Non-final Office action of July 3, 2002, please consider the following amendment and response in the above-identified application

A

AMENDMENT

Please replace the title with the following:

A METHOD AND SYSTEM FOR HANDLING ERRORS AND A SYSTEM FOR RECEIVING PACKET STREAM DATA.

In the Specification:

✓ Please replace the first paragraph in the Detailed Description of the Drawings with the following:

a1
In accordance with a specific embodiment of the present invention, detection and/or handling of error condition is enabled for an error being in the transport packet stream. A determination is made whether received data contains detectable error. If so, an error recovery operation is performed that includes the following: notification of the host CPU, MPEG video decoder, a display processor, and/or disregarding the data. The present invention is better understood by example with reference to the Figures herein, and in particular with reference to Figures 48-53.

[✓ Please replace paragraph 4 on page 12 with the following:

a2
The FRAMER DATA and FRAMER DEN signals are provided to each of the parsers of Figure 7, and the Buffer controller 760. The TPP parser 720 receives the header information of new packets when the framer 710 asserts an IN SYNC signal and a PACKET START signal.

The combination of these signals, when asserted, indicate that the present FRAMER DATA is part of the packet header. As a result, the TPP 720 receives the FRAMER DATA from the data bus for parsing.

[✓ Please replace paragraph 3 on page 89 with the following:

a3
The errors listed in the status codes above are based upon specific information associated with the headers of the specific packets. For example, in the transport packet header, the value
